1. GENERAL DESCRIPTION

The UZK12.071 battery module utilizes one non-spillable maintenance-free VRLA lead-acid battery, which is assembled in a package with all wiring and fusing included.

The battery module is available in two different options. It can be ordered as UZK-module with a battery or as UZO-module without a battery which can be installed at a later date to avoid outdated batteries. The battery module can either be mounted on a DIN-rail or be screwed on a flat surface.

4. MARKINGS

Marine
Class I Div 2
ATEX

Aug. 2017 / Rev. 2.2 DS-UZK12.071
All parameters are typical values specified at, 25°C ambient temperature unless otherwise noted.
The information given in this document is correct to the best of our knowledge and experience at the time of publication. If not expressly agreed otherwise, this information does not represent a warranty in the legal sense of the word. As the state of our knowledge and experience is constantly changing, the information in this data sheet is subject to revision. We therefore kindly ask you to always use the latest issue of this document (available under www.pulspower.com).

No part of this document may be reproduced or utilized in any form without our prior permission in writing.

**WARNING**  Risk of electrical shock, fire, personal injury or death.
- Turn power off before working on the device. Protect against inadvertent re-powering.
- Do not modify or repair the unit.
- Use caution to prevent any foreign objects from entering the housing.
- Do not use in wet locations or in areas where moisture or condensation can be expected.
- Do not touch during power-on, and immediately after power-off. Hot surfaces may cause burns.
5. INTENDED USE

This module is designed for installation in an enclosure and is intended for the general professional use such as in industrial control, office, communication, and instrumentation equipment.
Do not use this module in equipment, where malfunction may cause severe personal injury or threaten human life.

6. INSTRUCTIONS FOR DISPOSAL OF THE BATTERIES

Batteries must be completely discharged before replacement and can be returned to the supplier of the battery module or the battery manufacturer for disposal.
Always dispose batteries through a recycling organization.

7. INSTRUCTIONS FOR BATTERY STORAGE

Do not store batteries or battery modules at temperatures higher than 25°C or performance and lifetime may change.
Do not store discharged batteries. Keep batteries fully charged!
Charge retention is important to get the longest battery life. Stored batteries which are not fully charged age faster then charged batteries.
Do not store batteries longer than 9 months without charging or performance and lifetime may change. Every 9 months or whenever the open circuit voltage (OCV) falls below 12.6V, the battery module should be charged. Apply a charging voltage of 13.8V (at 25°C) for 72 hours. Batteries with an OCV below 12V must not be charged anymore and must be disposed.

8. INSTALLATION INSTRUCTIONS

This device may only be installed and put into operation by qualified personnel.
Before initial use, check the last charging which is marked on the battery. If it is older than 9 month, replace the battery.
Do not install the battery fuse until the installation work is complete.
This device does not contain serviceable parts, except the fuse or replacement battery. If malfunction should occur during installation or operation, first check the fuse and battery for proper functionality. If the unit is damaged or if the malfunction continues, immediately turn power off and send device to the factory for inspection.
Replacement fuses must be of the same type or an UL listed fuse with the same nominal value and characteristics.
Do not short-circuit the battery poles or power wires and always check correct battery polarity.
Mount the device onto a heavy duty DIN-rail or screw it securely on a flat surface. Before mounting the unit on a flat surface, detach the DIN-rail slider (remove the plastic lock mechanism by using a flat-blade screwdriver and move the lock downwards while pushing the plastic slide upwards at the same time) and the two aluminum DIN-rail brackets (Torx T10 screwdriver).
Do not install the battery module upside down.

Aug. 2017 / Rev. 2.2 DS-UZK12.071
All parameters are typical values specified at, 25°C ambient temperature unless otherwise noted.
Place the battery module in a cool area inside a cabinet. Install the device in an enclosure providing protection against electrical, mechanical and fire hazards. Ensure sufficient ventilation by following the requirements of the EN 50272-2.

CAUTION: The unit contains wet cell batteries. Ventilation of the installation room in accordance with the rules of Canadian Electrical Code, part 1 is required if used in Canada. The battery module is for use in a controlled environment. Do not use the device in pollution degree 3 areas without additional protection or in applications where a degree of protection better than IP00 is required. Do not use batteries other than the original batteries supplied by the manufacturer to avoid conflicts with agency approvals. The maximum surrounding air temperature is +50°C / +122°F. The operational temperature is the same as the ambient or surrounding air temperature and is defined as the air temperature 2cm below the device.

![Wiring scheme](image)

### 9. HAZARDOUS LOCATION INSTALLATION INSTRUCTIONS

The device is suitable for use in Class I Division 2 Groups A, B, C, D locations and for use in Group II Category 3 (Zone 2) environments.

ATEX Certificate: EPS 15 ATEX 1 025 X
ATEX Classification: II 3G EX ec IIC T4 Gc

**WARNING EXPLOSION HAZARDS!**
Substitution of components may impair suitability for this environment. Do not disconnect the device unless power has been switched off or the area is known to be non-hazardous.

A suitable enclosure must be provided for the end product which has a minimum protection of IP23 and fulfils the requirements of the EN 60079-15. Sufficient ventilation must be ensured in the final installation. Do not use batteries other than the original batteries supplied by the manufacturer or batteries, which are approved according to EN/ IEC 60079-7.
10. INSTRUCTIONS FOR REPLACING BATTERIES

Batteries need to be replaced periodically. The time interval depends on the ambient temperature in which the battery is used and on the number and depth of discharge cycles. In a typical application it is recommended to replace the batteries at least every 2 years.

Disconnect battery fuse before replacing the battery.

Regarding disposal of used batteries see chapter 6.

Fig. 10-1  Replacing the battery

To replace battery:
1) Loosen screws (1) with only one turn.
   (Use a flat-blade or Torx T20 screwdriver)
2) Slide the mounting bracket (2) sideways.
3) Tilt the mounting bracket to the front and take it off.
4) Unplug the battery terminals.
5) Remove the battery.
6) To insert the new battery use same procedure vice versa.
11. ENVIRONMENT

Operational temperature *) -10°C to +40°C (14°F to 104°F) For charging
                      -15°C to +50°C (5°F to 122°F) For discharging
Storage temperature  -20°C to +50°C (-4°F to 122°F) For storage and transportation
                      Recommendation: Do not store at temperatures higher than 25°C or performance and lifetime may change.
Humidity            5 to 95% r.h. IEC 60068-2-30 Do not energize while condensation is present
Vibration sinusoidal ±4mm at 16.7Hz fixed frequency for 1 hour Vibration in vertical mounting orientation according to IEC/EN 61056-1
Shock               free fall from 20cm onto a wooden floor Shock with bottom down orientation according to IEC/EN 61056-1
Altitude            0 to 6000m (0 to 20 000ft)
Degree of pollution 2 According to IEC 62477-1, not conductive
LABS compatibility  The unit does not release any silicone or other LABS-critical substances and is suitable for use in paint shops.
Corrosive gases     ISA-71.04-1985, Severity Level G3
                      *) Operational temperature is the same as the ambient temperature and is defined as the air temperature 2cm below the unit.

12. TERMINALS AND WIRING

The terminals are IP20 Finger safe constructed and suitable for field- and factory wiring.

<table>
<thead>

</tbody>
</table>

Maximal wire size, solid wire 4mm²
Maximal wire size, stranded wire 4mm²
American Wire Gauge AWG 12-10
Maximal wire diameter 3.5mm (including ferrules)
Wire stripping length 7mm / 0.28inch
Screwdriver Slotted 3.5x0.5mm
Recommended tightening torque 0.5Nm, 4.5lb.in

Instructions:

a) Follow national installation codes and installation regulations!
b) Ensure that all strands of a stranded wire enter the terminal connection!
c) Unused terminal compartments should be securely tightened.
d) Ferrules are allowed.

Aug. 2017 / Rev. 2.2 DS-UZK12.071
All parameters are typical values specified at, 25°C ambient temperature unless otherwise noted.

17. WALL/PANEL MOUNTING

Panel/wall mounting is possible by detaching the DIN-Rail brackets

Fig. 17-1 Panel/wall mounting – Removing the aluminium brackets and plastic slide

Detach the two aluminum brackets by removing the two screws with a Torx screwdriver (Torx 10).

Remove the plastic lock mechanism by using a flat-blade screwdriver to move the lock downwards while pushing the plastic slide upwards at the same time. Detach the plastic slide.

Panel/wall mounting is possible by using either the four holes on the rear or on the bottom of the unit.

Fig. 17-2 Hole pattern for wall mount

Fig. 17-3 Hole pattern for bottom mount

All dimensions in mm

Aug. 2017 / Rev. 2.2 DS-UZK12.071
All parameters are typical values specified at 25°C ambient temperature unless otherwise noted.
18. RECOMMENDATIONS FOR A LONG BATTERY LIFE

Temperature:
The temperature has the most impact on the service life. The hotter the temperature, the earlier the wear-out phase of the battery begins. The wear-out results in a degradation of battery capacity. Place the battery module in a cool location, e.g. near the bottom of the control cabinet. Do not place the battery module near heat generating devices. Do not overcharge batteries!

![Fig. 18-1 Service life (according to EUROBAT) vs. ambient temperature, typ.](image)

Number of discharge cycles and depth of discharge:
Do not discharge batteries more than necessary. Set buffer time limiter to the required buffer time. The number, as well as the depth of discharging cycles is limited. A replacement of the battery might be necessary earlier. When choosing the battery capacity, always try to get the next higher capacity than required. The depth of discharge reduces the service life of the battery and limits the number of cycles.

![Fig. 18-2 Battery degradation vs. discharging cycles, typ.](image)

Store batteries fully charged
Do not store discharged batteries. Keep batteries fully charged!
Charge retention is important to get the longest battery life. Stored batteries which are not fully charged age faster then charged batteries. Batteries which are not in use should be recharged at least once a year. The higher the ambient temperature, the shorter the charging interval. At storage temperatures higher than 30°C, recharging should be done at least every nine months.

Aug. 2017 / Rev. 2.2 DS-UZK12.071
All parameters are typical values specified at, 25°C ambient temperature unless otherwise noted.
19. MOUNTING ORIENTATIONS

The standard mounting orientation is the vertical installation onto a flat surface.

Fig. 19-1  Standard mounting orientation

The following mounting orientations are also allowed:

Fig. 19-2  Allowed mounting orientations

Do not use the battery module in an upside down position:

Fig. 19-3  Forbidden mounting orientation

Aug. 2017 / Rev. 2.2 DS-UZK12.071
All parameters are typical values specified at, 25°C ambient temperature unless otherwise noted.
