

Expert talk with VANDERLANDE

# Faster, cheaper and future-proof, thanks to decentralized power supplies

**SIGN IN NOW!**

The decentralization of complex production and logistics systems confronts many users with the question of a suitable power supply solution. Due to lacking alternatives, decentralized cabinets are often equipped with available IP20 components or complex customer-specific solutions are commissioned.

In a live talk between manufacturer and user, we will show you that it can also be done more efficiently and faster. Find out in the Publish Industry webcast how VANDERLANDE, a specialist in logistics process automation, implemented a solution based on the standardized FIEPOS platform from PULS.
